Rotary Units

Available in single spring, multi-spring, PTFE bellows and metal bellows designs. Manufactured from a variety of metal in single or double construction, balanced or unbalanced, as required for the seal application.

Stationary Units

Available in all sizes and types. Manufactured from metallic, ceramic or carbon materials and lapped to a flatness of 1 to 2 helium light bands. The secondary O-rings, cups and gaskets are supplied in compatible materials for the seal use specified.

Parts

Gaddis Guaranteed Parts (GGP) are available for most types and models of mechanical seals. All specifications meet or exceed those of the original equipment manufacturer. Parts include retainers, drive collars, springs, seal faces, bellows and adapters. Secondary sealing devices such as O-rings, U-cups, V-rings, wedges and gaskets are supplied in specified materials.

Call us for all your mechanical seal needs!

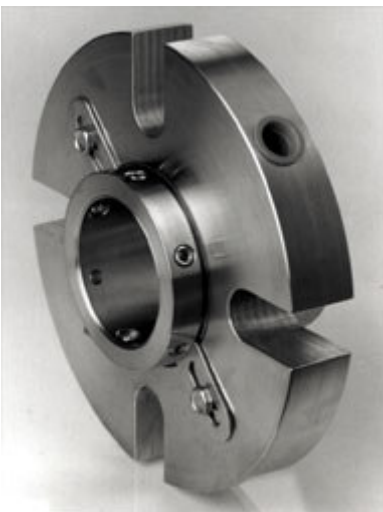

Seal Rebuilding

Rebuilt seals give equal service to new seals at a substantial saving. Worn seals are thoroughly cleaned, inspected, and repaired. Where certain parts cannot be repaired they are replaced with Gaddis Guaranteed Parts (GGP). Seals are inspected to assure that OEM standards are equaled or exceeded and are clearly labeled with the applicable part numbers.

Sleeves and Shafts

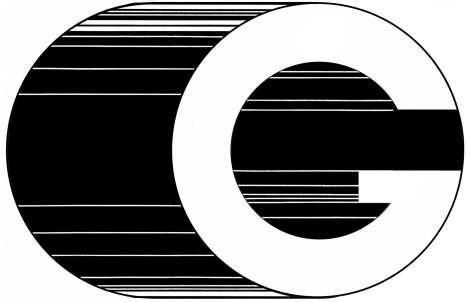

Produced in large number of standard sizes and to custom specifications. Materials include the full range of metals. Ceramic or metallic hard surfacing on wear surfaces applied to specification. Shafts and sleeves rebuilt and re-coated.

Cartridges

Available in single spring, multi-spring and welded metal bellows in balanced or unbalanced single, double or tandem configurations. Universal styles for standard applications. Special designs as required.

We've been guaranteeing our products for 60 years!
